

SCHEDULED MAINTENANCE BY VERIZON USER GUIDE

Purpose and Objectives

From time to time Verizon may perform Scheduled Maintenance activities on the network. This is also known as 'planned maintenance', 'change management' or 'maintenance'. Scheduled Maintenance may cause service interruptions to your IT network.

This document explains the Scheduled Maintenance process in more detail.

1 Maintenance Scheduling

1.1 Notice Period

Verizon will typically inform you by email at least 10 calendar days in advance of any service affecting scheduled maintenance event. The notice period may be significantly less for emergency maintenance events, see below for more information.

1.2 Scheduled Maintenance Windows

Scheduled maintenance on the Verizon network will normally take place weekdays between the hours of 00:00 and 06:00 local time. Transmission and power equipment maintenance normally takes place from Monday to Friday between the hours of 23:00 and 06:00 local time and during weekends between the hours of 00:00 – 24:00 local time.

1.3 Emergency Maintenance

On some occasions emergency maintenance is required to prevent a network failure. This unforeseen emergency maintenance will be processed as a high priority. Verizon strives to inform its customers of this type of maintenance.

1.4 Maintenance on Verizon equipment at customer premises

When scheduled maintenance is required to be performed on customer equipment (i.e. IP Dedicated router, Security Services, Private IP or Co-location Services), it will typically be executed on a mutually agreed date / time and time-window.

2 Maintenance Communication

2.1 How to enroll for notifications emails

You can ask your account manager to enroll or request enrollment via our support teams.

2.2 Notification email options

The notification email can be changed to accommodate your operational requirements:

- Company name: (in case you wish Verizon to directly notify your clients)
- Language(s): Language(s) are English (default), Danish, Dutch, French, German, Italian, Norwegian, Portuguese, Spanish and Swedish.
- Text format: Email formats are either HTML (default) or Plain Text

- The email notification profile is linked to the recipient of the email. Hence, it is possible that for the same scheduled maintenance event different persons within the same company receive different notification emails. Profiles may be changed by sending an email to: GEMC@VERIZON.COM

2.3 Notification Email – Recipients

If you would like to understand who within your company receives notifications for specific service IDs, then please send an email to: GEMC@VERIZON.COM

The email should contain the company name.

2.4 Scheduled Maintenance Events – VEC Dashboard

Customers may view approved scheduled/in-progress/completed maintenance events on-line for their entire install base. Please contact your account manager if you wish to receive access to the Verizon Enterprise Portal (VEC) dashboard module.

3 Scheduled Maintenance & Proactive Incident Tickets

Verizon uses a global scheduled maintenance system to support the Change Management process. This system is linked with the global network management platform and the global incident ticketing system.

For services with proactive incident ticketing, an alarm may be triggered by the scheduled maintenance event which will create a proactive (priority 4) incident ticket. This ticket is automatically correlated to the scheduled maintenance event and will be automatically closed when the alarm clears prior the end of the scheduled maintenance window. If the alarm persists after the end of the scheduled window, then the ticket will be automatically closed and a new proactive (priority 1) ticket will be opened and sent to the technicians within the Verizon repair center to investigate.

4 Proactive Incident Tickets – Customer Scheduled Maintenance

Customers performing maintenance (including power down/up and reboots) may also trigger alarms and proactive tickets. Hence, it is important to notify Verizon in advance of these activities so the proactive tickets may be automatically correlated to your scheduled maintenance event. This can be done by:

- Managed WAN (MPLS) Services:
 - Please submit a Customer Maintenance Change Request via the portal
- Other Services:
 - Please send an email to GEMC@VERIZON.COM and specifying the circuit ID and the start and end times of the maintenance.

5 Questions?

If you have any questions, or should you wish to postpone or reschedule the event upon receiving the notification, just send an email request to the Maintenance Notification team (email: GEMC@VERIZON.COM).

The customer needs to suggest an alternate date and time for the maintenance to take place

Note: The Maintenance Notification team operates 24x7.
